## Tight Buffered Compact Cable (nine over three)

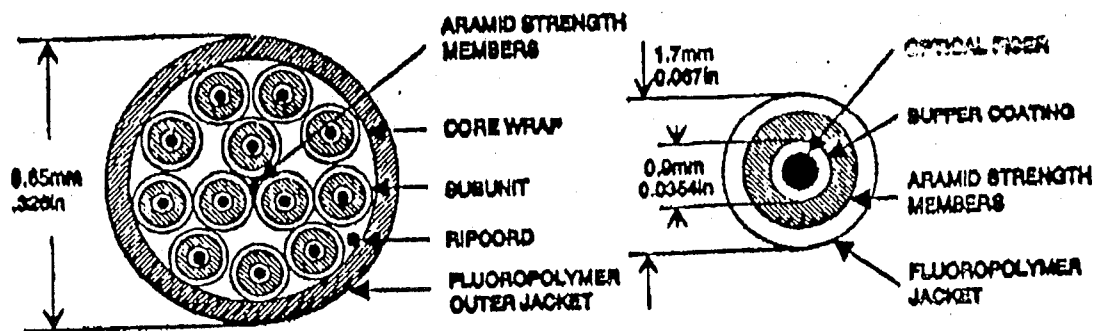

Pilkington Tight Buffered Compact cable is manufactured with each of the upjacketed optical fibers intimately enclosed within a Kevlar® bundle. The individual units can be stranded together with further strengthening members and over sheathed with a glove fit protective jacket of either OFNP or OFNR rated thermoplastic designed to meet the requirements of either UL 910 or UL 1666, respectively. The design, construction and Kevlar® reinforcement produces a tough resilient sub-cable which is suitable for direct termination to connectors.

Pilkington Tight Buffered Compact Cable is especially suitable for rugged indoor use where direct connectorization is required.

### BENEFITS

- Range of optical fiber types available
- Easy cable termination
- Less duct space required due to compact lightweight cables. 1.7 mm diameter units provide small size and high flexibility (8.65 mm diameter).
- Easy fiber identification with individually color coded sub-cables
- Cost savings can be achieved due to elimination of Break-out Boxes
